

### Markets

- Safety Apparel
- Novelty Fluorescent & Blacklight Designs
- High Visibility Signage
- Sportswear and Spiritwear

### Fluorescent Pink and Fluorescent Yellow

Used as individual spot colors or combined with CMYK, the bold new fluorescent colors are ideal for creating high-visibility safety apparel and signage or for creating trendy, psychedelic and retro looks. As truly fluorescing colors, images are exceptionally vivid in natural light and eye-popping in black light.

### BlackLight Blue

Invisible in natural light, Blacklight Blue can only be seen when exposed to black light! Similar to the ink used on driver's licenses or nightclub hand-stamps, BlackLight Blue can be use for Identification, Anti Piracy and Novelty applications. Imagine a T-Shirt with one message in natural light and an entirely different message in black light!

PRODUCT #	DESCRIPTION	MSRP

## Spot Color Driver Makes Designing and Printing with Specialty Ink Sets a Breeze!

Spot Color Driver works in concert with Sawgrass CMYK and Specialty Sublimation Inks providing a simple solution for incorporating exciting Fluorescent Pink and Yellow accents and discrete Blacklight Blue images into your designs. Utilizing a simple Click and Fill Spot Color Replacement Process, Spot Color Driver is easy to use and eliminates the cost and complexity of RIP software for most applications.

Plus, Spot Color Driver includes all of the power and convenience of PowerDriver IQ; ColorSure Palette, Custom Palette Utility, Color Finder, Mirror Image and more...

### How Does it Work?

Simply select the desired specialty spot color from the ColorSure Palette and fill the desired spot color areas of your design with it! This Click and Fill spot color replacement process eliminates the need for layered art, spot color separations or complicated and costly RIP software! The specialty ink colors can be used as spot colors within the design or added to CMYK colors in 10% increments for a color bump.
